

1. PRINT COUNT OF UPPER AND LOWERCASE LETTERS

PROGRAM EDITOR

Python

Run

Save

```
1 n=input()
2 u=l=0
3 for i in n:
4     if i.isupper():
5         u+=1
6     elif i.islower():
7         l+=1
8 print("Uppercase: ",u)
9 print("Lowercase: ",l)
```

INPUT

AAA

OUTPUT

Uppercase: 3
Lowercase: 0

2. PRINT COUNT OF ALPHABETS, NUMBERS AND SPECIAL SYMBOLS

PROGRAM EDITOR

Python

Run

Save

```
1 n=input()
2 a=d=s=0
3 for ch in n:
4     if ch.isalpha():
5         a+=1
6     elif ch.isdigit():
7         d+=1
8     else:
9         s+=1
10 print("Alphabets: ",a)
11 print("Number: ",d)
12 print("Special characters: ",s)
```

INPUT

fg

OUTPUT

```
Alphabets:  2
Number:  0
Special characters:  0
```

3. palindrome or not

PROGRAM EDITOR

Python ▼

Run Save

```
1 s1=input()
2 if s1==s1[::-1]:
3     print("Palindrome")
4 else:
5     print("Not Palindrome")
```

INPUT

malayalam
malayalam

OUTPUT

Not Palindrome

4. NO OF ORD IN STRING

The image shows a screenshot of a Python IDE interface. The main window is titled "PROGRAM EDITOR" and contains the following Python code:

```
1 n=input()
2 print(len(n.split()))
```

Below the editor is an "OUTPUT" section showing the result of the program's execution:

```
2
2
```

To the right of the editor is an "INPUT" section with a text box containing the string "Hello how". The "Run" button is highlighted in green, and the "Save" button is in blue. A language dropdown menu is set to "Python".

5. Remove all vowels in a string

The screenshot shows a web-based Python IDE interface. At the top, there's a 'PROGRAM EDITOR' tab with a language dropdown set to 'Python'. To the right of the editor are 'Run' and 'Save' buttons. The editor contains the following Python code:

```
1 n=input()
2 for i in "aeiouAEIOU":
```

Below the editor is an 'OUTPUT' section. The input field on the right contains the text 'Hello how'. The output field displays the result 'Hll hw', where all vowels have been removed from the input string.

6. Find the string whose length is higher than the other string from a group

The image shows a web-based Python IDE interface. On the left is the 'PROGRAM EDITOR' with a dark background and syntax-highlighted Python code. Above the editor is a language dropdown set to 'Python' and two buttons, 'Run' (green) and 'Save' (blue). On the right is the 'INPUT' panel with a light gray background, showing the input '3' on the first line and 'apple' on the second line.

```
1 n=input().split()
2 l=""
3 for i in n:
4     s=input()
5     if len(i)>len(l):
6         l=i
7 print(l)
```

INPUT

3
apple
